DEPLOYED WEBSITE USER TESTING- as of 29/2/24

Test Description	Expected Result	Actual Result
Title returns to home	When you click "Nicole Nightmare" in the navigation bar the home component renders	As expected
Home returns to home	If you press the "Home" link in the navigation bar, the home component renders	As expected
About brings you to about page	If you press the "About" link in the navigation bar, the about component renders	As expected
Home page has description	Once the home page has been rendered a description of the artist can be read.	As expected - has lorum ipsum
Home page shows featured items	Once the home page has been rendered, featured items are listed	As expected
You can add items to cart through the add item button attached to item display	Either in conjunction with the featured items or the items in the shop front, clicking the button labelled "add to cart" adds the items to the cart	As expected
When items are added to cart the cart icon reflects this change	When items are added to cart, the cart icon has a red notification that reflects the number of items in the cart	As expected
Cart component renders	By clicking on the top right symbol in the navbar you can check your cart	As expected
You can remove items from your cart	When in the cart, if there are items within the cart by clicking on the 'x' next to them you can remove them.	As expected

The totals in the cart are added up in real time	When cart items are either added or removed from the cart the subtotal is changed to reflect this	As expected
Items in the cart are persistent between sessions	When you close the browser or refresh the page any items in your cart should remain in your cart upon revisiting the website.	As expected
You can check out	When looking at the cart, you should be able to click the "Check Out" button and be brought to a component in which you enter your details. For this stage of deployment, to avoid the administrative and possibly legalistic issues involved with transferring real money the payment system accepts "4242 4242 4242 4242" with any CVC and any future date. After inputting valid bank details you should be able to complete your purchase.	As expected
You get a notification after you successfully check out	After successfully completing your purchase you should be brought to a page saying you've successfully completed your purchase.	As expected
You can click the item and see a component displaying just that item	When looking at either the featured items component or the shop front after clicking on the picture of the item you will be taken to component displaying just that item	As expected
Log On page renders	When you click the person icon you will be shown two fields (one for your email, one for your password), a login button and a link to register a new account.	Failure- directs to home page

Log on page works	If you input a valid email and password (for a normal user email: horse@jorsington.com with the password: mayorhorse), you will log in which will set a cookie in your browser. You will be redirected to the home page component.	If directed to component via adding /login: yes. Unstyled & no handling if a user inputs an incorrect email/password. Password appears in plain text.
You will be automatically logged in	If you click the person icon in the navbar and you have a cookie set in your browser you should be automatically logged in and redirected to the logout component.	Failure- stays on log in component
The logout component renders	When redirected to the logout component, a message saying "You're logged in" with a number of buttons should render. Every user should see a button labelled "Log Out" and another button labelled "Account Settings.	Failure- only "Log Out?" button renders
The logout component renders additional content for administrators	If redirected to the log out component while logged on as an administrator (email: nicole@nightmare.com, password: imanartist) and additional button labelled "Your Dashboard" will be rendered in addition to the "Log Out?" button and "Account Settings" button	Failure- only "Log Out?" button renders
You can log out	If you click the "Log Out?" button the "access-token" cookie should be removed from the browser's storage and you should be redirected back to the home component	Failure. Returns a 401.
New Account Component renders	After clicking the "Make new account" link on the home page a component consisting of four input field for the user accounts email,	As expected. Fields for email and password are generic text inputs, not inputs designed for email and password.

	first name, last name and password will render alongside a submit button.	
Account Settings renders	Upon the logout component being rendered if you click the account settings button a component for editing your account should render on the page. This consists of a heading titled "change password", an input field for that password and and submit button. Underneath that a button labelled "Delete Account" should be rendered.	Failure- nothing renders.
You can change your password	If a valid password is inputted into the change password field the user should be redirected back into the home page component.	Failure- nothing renders.
You can delete your account	Upon the editing account setting being rendered, you should be able to click the "Delete Account" button. After doing so a heading reading "Are you sure?" with a button labelled "Yes" should render. After clicking yes you should be redirected back to the home page component.	Failure- nothing renders.
The Artist Dashboard component should render	Upon the logout page rendering after you've logged on as an admin you should be able to click a button labelled "Your Dashboard". A component for creating items, editing existing items and deleting items should render.	When directed via the /artistportal suffix on the url renders.
The artist can add items to the store	On the artist dashboard page you should be able to add a new item to the store. Underneath the heading "Create Item" there	Failure- returns 404

	should be a series of inputs and a button labelled "Add". You should be able to provide appropriate values for the name, description and price. You should be able to choose the category, size, and featured value and upload an image of the item. The you should be able to press submit. Upon a successful upload an alert should confirm the success.	
The artist can edit items in the store	On the artist dashboard page you should be able to change aspects of an existing store item. Underneath the heading "Update Item" there should be a series of inputs and a button labelled "Update". After selecting the name of the item you wish to edit the values of that item should be filled automatically. You should be able to change the value of the desired item and press "Update". If the process was successful an alert should pop up informing you so.	Failure- returns 404
The artist can remove items from the store	On the artist dashboard page you should be able to delete an existing store item. Underneath the heading "Delete Item" there should be a drop down box that shows a list of all items in the store currently and a button labelled "Delete". After selecting the name of the item you wish to delete you should be able to hit the "Delete" button. Upon a successful deletion an alert should pop up informing you so.	Failure- returns 404
